The global Flip-Chip Flux market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Flip-chip flux, also known as flip-chip underfill or flip-chip adhesive, is a specialized adhesive or flux used in semiconductor and microelectronics assembly processes, particularly in the flip-chip bonding method.

Flux is a substance used in various industries, including electronics manufacturing, welding, and metallurgy, to facilitate processes such as soldering, welding, and metal purification. The global market trends for flux can be influenced by factors such as technological advancements, sustainability considerations, industry-specific needs, and regulatory changes. In the electronics industry, the trend was toward miniaturization and the use of lead-free solders. Flux formulations were adapted to meet the requirements of lead-free soldering processes while ensuring high-quality solder joints. Halide-free fluxes gained popularity due to concerns about halide corrosion. These fluxes reduced the risk of board-level failures and improved the reliability of electronic assemblies.
