The global Flip Chip Welding Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Flip chip welding machine is a kind of equipment specially used to realize flip chip welding process. Flip chip welding is to weld the chip face down and directly interconnect it with the packaging substrate or wiring base steel plate. This technology has the advantages of short interconnect lines, small parasitic capacitance and internal parasitic inductance, and the I/O level of the chip can be set arbitrarily on the surface of the chip. It is especially suitable for high frequency, high speed, and high I/O terminal scale. Packaging of sexual integrated circuit chips (LSI) and integrated circuit process integrated circuit chips (VI.SI). The flip chip welding machine ensures precise alignment and reliable connection between the chip and the substrate through precise mechanical control and advanced welding technology. It may integrate multiple functions, such as chip positioning, welding parameter setting, welding process monitoring, and welding quality inspection, to achieve an efficient, stable, and high-quality flip-chip welding process.

With the continuous development of the semiconductor industry and the advancement of chip packaging technology, flip chip technology has gradually become mainstream. This has driven the rapid growth of market demand for flip chip bonding machines. Especially in the fields of high-performance computing, communications, consumer electronics and other fields, the demand for flip-chip welding machines is even more urgent. In order to meet market demand and improve production efficiency, flip chip welding machines have made significant breakthroughs in technology. For example, by introducing advanced welding technology, intelligent control systems and precise

mechanical structures, welding accuracy, speed and stability are improved. Looking to the future, with the continued development of the semiconductor industry and the continuous innovation of chip packaging technology, the flip chip welding machine market is expected to continue to maintain rapid growth.
