The global Float Regulating Valve market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The float regulating valve is a type of valve commonly used to control fluid flow. Its structure contains a floating ball that moves up and down as the pressure of the fluid changes, thereby adjusting the opening of the valve and controlling the flow of fluid. When the fluid pressure increases, the float rises and the valve closes; when the fluid pressure decreases, the float falls and the valve opens to regulate the fluid flow.
