Abstracts

The global Floating Foundation market size is predicted to grow from US$ 127 million in 2025 to US$ 218 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Floating foundations are primarily used in deep-sea wind power, marine energy, and offshore engineering. They utilize a buoyant floating structure to support the superstructure and are connected to the seabed via a mooring system to maintain overall stability. Unlike fixed monopiles and jacket foundations, floating foundations typically do not require the main structure to be directly anchored to the seabed. They can be deployed in deeper waters, making them particularly suitable for deep-water areas where the economics of traditional fixed foundations are reduced or construction difficulties increase significantly. In the field of floating offshore wind power, they primarily bear the weight of wind turbine generators, towers, and related equipment, and withstand the dynamic loads generated by wind, waves, currents, and turbine operation. Based on structural and stability principles, floating foundations mainly include semi-submersible, column/monocopter, tension leg, and barge types. Core performance indicators include buoyancy and stability, motion response, structural strength, fatigue life, mooring reliability, manufacturability, and total life cycle cost.

The floating foundation industry chain covers upstream raw materials and core components, midstream design, manufacturing, and system integration, and downstream offshore wind power development, construction, and operation and maintenance services. The upstream sector mainly includes steel plates and sections, concrete, welding materials, anti-corrosion coatings, anchor chains, wire ropes or synthetic fiber cables, anchoring devices, connectors, and monitoring sensors. Among these, marine engineering steel, mooring systems, and anchoring systems have a

significant impact on the safety and cost of the foundation. The midstream sector mainly includes floating foundation conceptual design and engineering design, structural calculations and hydrodynamic analysis, steel or concrete structure manufacturing, modular assembly, mooring system integration, offshore towing, installation and commissioning, and overall integration with wind turbine towers and units. Participants include foundation technology developers, shipbuilding and marine engineering equipment manufacturers, engineering design companies, EPCI contractors, and specialized mooring suppliers. The downstream sector is centered on offshore wind power developers and energy companies, extending to port logistics, installation vessels, tugboats, submarine cables, offshore construction, and long-term testing and operation and maintenance services. As floating wind power develops towards large-scale production, the industry chain is gradually shifting from customized manufacturing for individual demonstration projects to standardized design, mass production, port assembly line assembly, and large-scale offshore deployment.

The long-term development prospects of floating foundations are mainly driven by the development of deep-sea wind power resources, the reduction of high-quality nearshore wind farms, the increasing size of offshore wind turbines, and the global low-carbon energy transition. As offshore wind power development gradually extends from shallow nearshore waters to deep-sea areas with depths exceeding 50-60 meters or even 100 meters, traditional fixed foundations face greater limitations in terms of material consumption, construction equipment, and installation costs. Floating foundations can expand the exploitable sea areas and utilize more stable and higher-quality offshore wind resources, thus becoming an important technological direction for the next stage of offshore wind power development. Currently, the industry is still in the transition phase from demonstration projects to commercial-scale deployment. High costs, incomplete standardization of foundation solutions, high technical requirements for mooring and dynamic submarine cables, and insufficient port and supply chain capabilities remain the main constraints. However, with the application of large wind turbines above 15MW, the development of lightweight and modular foundation designs, the optimization of steel and concrete solutions, mass production, wet towing installation, and shared mooring technologies, the unit kilowatt foundation cost and installation cost are expected to continue to decline. In the future, markets with deep-water resources, such as Europe, Japan, South Korea, the United States, and China, will become the main growth areas. Floating foundations are expected to gradually evolve from current project-based marine engineering products into large-scale, standardized core foundation equipment for offshore wind power.

LPI (LP Information)' newest research report, the “Floating Foundation Industry Forecast” looks at past sales and reviews total world Floating Foundation sales in 2025, providing a comprehensive analysis by region and market sector of projected Floating Foundation sales for 2026 through 2032. With Floating Foundation sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Floating Foundation industry.

This Insight Report provides a comprehensive analysis of the global Floating Foundation landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyses the strategies of leading global companies with a focus on Floating Foundation portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Floating Foundation market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Floating Foundation and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Floating Foundation.

This report presents a comprehensive overview, market shares, and growth opportunities of Floating Foundation market by product type, application, key players and key regions and countries.

1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Floating Foundation Market Size (2021-2032)
  2.1.2 Floating Foundation Market Size CAGR by Region (2021 VS 2025 VS 2032)
  2.1.3 World Current & Future Analysis for Floating Foundation by Country/Region (2021, 2025 & 2032)
2.2 Floating Foundation Segment by Type
  2.2.1 Semi-submersible
  2.2.2 Tension-leg Platform (TLP)
  2.2.3 Spar-type
  2.2.4 Others
  2.2.5 Floating Foundation Market Size by Type
    2.2.5.1 Floating Foundation Market Size CAGR by Type (2021 VS 2025 VS 2032)
    2.2.5.2 Global Floating Foundation Market Size Market Share by Type (2021-2026)
2.3 Floating Foundation Segment by Draft
  2.3.1 <20 m
  2.3.2 20–50 m
  2.3.3 >50 m
  2.3.4 Floating Foundation Market Size by Draft
    2.3.4.1 Floating Foundation Market Size CAGR by Draft (2021 VS 2025 VS 2032)
    2.3.4.2 Global Floating Foundation Market Size Market Share by Draft (2021-2026)
