## Abstracts

The global Floating Hose market size is predicted to grow from US\$ 309 million in 2025 to US\$ 511 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2025, global Floating Hose approximately 7,029 km, with an average global market price of around US\$ 45 per m. Gross margin is about 47%. The cost is 24 usd. The Production is about 9,000 km. Floating Hose is used on water surfaces, typically for transferring fluids such as oil, fuel, water, or slurry between vessels or from offshore platforms to shore facilities. These hoses are equipped with buoyant materials that allow them to float on water, making them ideal for marine applications like oil offloading, dredging, and water transfer. Floating hoses are built to withstand harsh marine conditions, including exposure to UV rays, saltwater, and varying pressures, ensuring durability and flexibility in demanding environments. Their robust design includes layers of reinforcement to handle high pressures and heavy-duty operations.

### 1. Expansion towards deepwater and highly dynamic environments

As offshore oil and gas operations move into deeper waters, floating hoses will increasingly be deployed in highly dynamic systems such as FPSOs, FLNG units, SPMs and subsea manifolds. Future products must offer higher tensile strength, superior fatigue resistance and enhanced dynamic performance to withstand complex environmental loads.

### 2. Adoption of advanced composite materials

Floating hoses will evolve from conventional rubber structures toward multi-layer composite designs, incorporating high-strength synthetic fibres, steel reinforcements and corrosion-resistant linings. These material upgrades significantly improve pressure

resistance, chemical stability and ageing performance, extending service life and reducing maintenance costs.

### 3. Integration of smart monitoring and digital maintenance

Future floating hoses will embed sensors to monitor pressure, temperature, strain and structural fatigue in real time. Digital platforms will enable predictive maintenance strategies, reducing unexpected failures and improving overall system safety and operational efficiency.

### 4. Stricter safety and environmental requirements

With tightening environmental regulations and offshore safety standards, floating hoses will increasingly focus on leak prevention, double-layer protection and emergency release systems (ERC). Environmental compatibility, low-toxicity materials and recyclability will also become critical design considerations.

### 5. Modular and customised system solutions

Due to project-specific offshore conditions, floating hoses will move toward modular and customised designs. Systems will be tailored according to water depth, transported media, flow rates and connection configurations, improving system adaptability and overall project cost-effectiveness.
