The global Floating Offshore Wind market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Floating Offshore Wind refers to wind turbines mounted on floating structures that are anchored to the seabed but not fixed directly to it. This technology allows for the placement of wind turbines in deeper waters where traditional fixed-bottom turbines are not feasible, harnessing stronger and more consistent wind resources. Floating offshore wind farms have the potential to significantly expand the capacity and efficiency of renewable energy generation, contributing to energy diversification and the reduction of greenhouse gas emissions. This innovation addresses challenges related to ocean depth, environmental impact, and the logistics of offshore wind energy deployment.

United States market for Floating Offshore Wind is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
