The research report highlights the growth potential of the global Floating Photovoltaic Mounting System market. Floating Photovoltaic Mounting System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Floating Photovoltaic Mounting System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Floating Photovoltaic Mounting System market.

The floating photovoltaic support system is a system that installs photovoltaic modules on the water. The floating photovoltaic support system can make full use of water resources, such as lakes, reservoirs, ponds, etc., to increase the installed photovoltaic power generation capacity. Especially when geographical resources are limited, the scale of photovoltaic power generation can be effectively expanded. Since floating photovoltaic modules are on the water, they can benefit from the heat dissipation effect of the water, reduce module temperature, and improve battery conversion efficiency. At the same time, water bodies can also reflect sunlight, increase the absorption of light energy by photovoltaic modules, and further improve power generation efficiency.
