The global Floating Roof Skimmer System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Floating roof skimmer system is used in storage tanks, particularly those storing petroleum products or other liquids, to remove floating contaminants or debris from the liquid surface. It typically consists of a floating skimming device attached to the roof of the tank, which moves with the fluid level, and collects any floating substances present on the liquid surface. The system includes a mechanism to transfer the collected contaminants to a separate containment area, preventing them from mixing with the stored liquid and facilitating their removal. Floating roof skimmer systems are commonly used in the oil and gas industry to maintain the quality and purity of stored liquids.
