The global Flooded Heat Exchanger market size is predicted to grow from US\$ 3788 million in 2025 to US\$ 4840 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

The flooded heat exchanger is a highly efficient heat exchange device widely used in refrigeration and air conditioning systems. Its working principle is to allow the refrigerant to completely submerge the heat transfer surface of the evaporator or condenser to ensure the maximum contact area and the best heat transfer efficiency. In the flooded evaporator, the low-temperature and low-pressure liquid refrigerant fills the entire evaporation space, exchanges heat with the chilled water flowing through the heat exchange tube, and evaporates into gas after absorbing heat; while in the flooded condenser, the high-temperature and high-pressure gaseous refrigerant is cooled and condensed into liquid.

United States market for Flooded Heat Exchanger is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
