A floor scrubbing machine is a device used to clean the floor. The basic floor scrubber was introduced in the 1920s. The modern floor scrubbing machine, which is also referring to automatic floor scrubber, was not invented until the middle of the 20th century. It uses a system that generally involves spraying the floor with a combination of cleaning chemicals and water, scrubbing the floor to break up the spill, residue, and dirt, and then a squeegee-vacuum combination that absorbs the used water, leaving the floor completely dry and clean. Now, floor scrubbers are widely used in these public places like supermarkets and modern malls.
