The floor-standing spray fan is a new type of fan product that integrates cooling, humidification, dust removal and air purification. It uses the advanced centrifugal secondary atomization principle to atomize water into ultra-fine droplets, and evenly blows these droplets into the air through the airflow of the fan. During the evaporation of the droplets, a large amount of heat will be absorbed, thereby reducing the temperature of the surrounding environment and increasing the air humidity, achieving the effect of cooling and humidification. At the same time, the spray fan can also effectively reduce dust in the air and purify the air.

The global Floor-standing Mist Fan market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
