Regulators agent can adjust the action of other agents (mainly collector) and mineral surface, adjust pulp properties, and improve the selectivity of minerals to be selected. Adjusting agent according to its main role, can be divided into: to promote the collector and mineral action, so as to improve the mineral floatability activator; An inhibitor, as opposed to an activator, used to weaken the interaction of a collector with a mineral, thereby reducing the floatability of a mineral; Used to adjust the pulp pH value, so as to adjust the mineral surface electrical properties, change the pulp ion composition of pH regulator; Dispersants or flocculants that promote the dispersion, agglomeration or flocculation of fine mud in pulp; A defoamer designed to weaken the stability of mineralized foam and eliminate the harmful effects of excessive foam on separation and foam transportation.
