The current collector of a flow battery is a key component in a flow battery system. It is used to collect and conduct the current generated by the battery reaction and ensure that the electrochemical reaction inside the battery is evenly distributed. The current collector is usually made of highly conductive materials such as metal or composite materials, and has corrosion resistance to adapt to the corrosive environment of the electrolyte. It not only collects current, but also helps to evenly distribute the electrolyte to ensure efficient operation and long life of the battery.

The global Flow Battery Current Collector market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
