The global Flow Battery Graphite Composite Bipolar Plates market size is predicted to grow from US\$ 146 million in 2025 to US\$ 577 million in 2032; it is expected to grow at a CAGR of 21.8% from 2026 to 2032.

In 2025, global sales of Flow Battery Graphite Composite Bipolar Plates were approximately 1.15 million square meters, with an enterprise-level average selling price of about US\$130 per square meter. Gross margins among major manufacturers were approximately 25%–38%.

Flow Battery Graphite Composite Bipolar Plates are core components of flow battery stacks, manufactured using natural graphite, synthetic graphite, flake graphite, or expanded graphite as the primary conductive material, combined with thermoplastic resin, thermosetting resin, or other polymers as the matrix or binder. They are typically produced through compounding, compression molding, extrusion, injection molding, hot pressing, or other composite-forming processes. Installed between adjacent cells within a battery stack, these plates primarily provide electrical conduction, electrolyte separation, structural support, and fluid distribution. They must therefore offer low volume resistivity, good liquid impermeability, resistance to acid and alkali corrosion, adequate mechanical strength, and high dimensional stability.

Compared with pure graphite bipolar plates, Flow Battery Graphite Composite Bipolar Plates generally provide greater toughness, higher forming efficiency, better suitability for integrated flow-field fabrication, and lower production costs at scale. However, increasing the resin content may reduce electrical conductivity, requiring manufacturers to balance conductivity, mechanical strength, and electrolyte impermeability through material formulation and process optimization. These products are mainly used in all-

vanadium flow batteries, zinc-bromine flow batteries, iron-chromium flow batteries, all-iron flow batteries, and other aqueous flow battery energy storage systems.

United States market for Flow Battery Graphite Composite Bipolar Plates is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Flow Battery Graphite Composite Bipolar Plates is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Flow Battery Graphite Composite Bipolar Plates is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
