The flow battery stack is the core of the flow battery, which is composed of multiple unit cells, each of which includes a positive electrode, a negative electrode and a separator. The positive and negative electrodes usually use graphite or carbon fiber materials to provide good electrical conductivity and chemical stability. The separator is used to prevent direct mixing of electrolytes while allowing ion exchange. It is the core unit of the battery system and has the characteristics of high efficiency, reliability and maintainability. It is widely used in energy storage systems, renewable energy grid connection and other fields.
