The global Flue Gas Desulfurization and Dust Removal Service market size is predicted to grow from US\$ 6998 million in 2025 to US\$ 10983 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Flue Gas Desulfurization and Dust Removal Service refers to engineering and operational services provided for industrial boilers, power plants, chemical plants, and other combustion systems. The service removes sulfur dioxide (SO₂) and particulate matter from flue gas using wet or dry FGD technologies, electrostatic precipitators (ESP), and baghouse filters to meet emission standards. Service scope typically includes system design, equipment selection, installation, commissioning, operation and maintenance, and technical optimization. This service is widely applied in coal-fired power plants, steel plants, cement plants, waste incineration, and chemical industries.

The future development of flue gas desulfurization and dust removal services will trend toward high efficiency, low energy consumption, intelligent operation, modular design, and integrated solutions. Services will incorporate automation, real-time monitoring, data analytics, and remote management to enable continuous operation and optimized emissions. With increasingly strict environmental regulations and industrial green transformation, higher requirements are placed on desulfurization efficiency, dust collection accuracy, system reliability, and operation and maintenance capabilities, while promoting combined use of wet, dry, and hybrid technologies to enhance overall system economy and environmental performance.
