A fluidized bed occurs when a bunch of different solid particles is put through appropriate conditions to make the mixture act like a fluid. This procedure is conducted by forcing fluids, air, and pressurized gas through the bedded layer of solid particles. After this process, fluidization takes place as solid materials obtain the qualities found in normal fluid. The global fluid bed and coating system market is likely to observe growth with the rising demand of the product from the pharmaceutical industry. The fluid bed and coating system is utilized in the pharmaceutical businesses for the purpose of coating a wide range of pharmaceutical formulations and active pharmaceutical ingredients.
