The report requires updating with new data and is sent in 48 hours after order is placed.

Fluid Film Bearings, or Fluid Bearings, are bearings in which the load is supported by a thin layer of rapidly moving pressurized liquid or gas between the bearing surfaces. Since there is no contact between the moving parts, there is no sliding friction, allowing fluid bearings to have lower friction, wear and vibration than many other types of bearings. Thus, it is possible for some fluid bearings to have near-zero wear if operated correctly.

The global Fluid Film Bearings market size is projected to grow from US\$ 3381 million in 2024 to US\$ 5910 million in 2030; it is expected to grow at a CAGR of 9.8% from 2024 to 2030.
