The global Fluid Permanent Magnetic Separator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Fluid permanent magnetic iron remover is a device that uses a strong magnetic field to filter and separate iron impurities or other magnetic substances in fluids. When the fluid containing magnetic impurities passes through the iron remover, these magnetic particles are attracted by the strong magnetic field and captured on the surface of the magnetic rod or magnetic plate, thereby separating from the fluid. Fluid permanent magnetic iron remover can efficiently remove ferromagnetic impurities in fluids, improve the purity and quality of products, and protect downstream equipment from wear and damage.
