The global Fluidized Bed Concentrator (FBC) market size is predicted to grow from US\$ 19.1 million in 2025 to US\$ 25.9 million in 2031; it is expected to grow at a CAGR of 5.2% from 2025 to 2031.

A fluidized bed concentrator (FBC) is an industrial process for the treatment of exhaust air. The system uses a bed of activated carbon beads to adsorb volatile organic compounds (VOCs) from the exhaust gas. Evolving from the previous fixed-bed and carbon rotor concentrators, the FBC system forces the VOC-laden air through several perforated steel trays, increasing the velocity of the air and allowing the sub-millimeter carbon beads to fluidize, or behave as if suspended in a liquid. This increases the surface area of the carbon-gas interaction, making it more effective at capturing VOCs.

North America is the largest Fluidized Bed Concentrator (FBC) market with about 61% market share. Japan is follower, accounting for about 29% market share.

The key players are TKS Industrial, Kurekan, CECO Environmental, Environmental C&C, Topcent Enviro etc. Top 3 companies occupied about 85% market share.
