The global Fluorene Methacrylate market size is predicted to grow from US\$ 9.59 million in 2025 to US\$ 16.04 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Fluorenyl methacrylate monomers are functional methacrylate monomers that contain both a fluorenyl aromatic group and a polymerizable methacrylate double bond. Representative products include 9-fluorenyl methacrylate, CAS 46969-53-3, and (9H-fluoren-9-yl)methyl methacrylate, CAS 106120-02-9. These monomers can be incorporated into polymethacrylate backbones through radical polymerization, copolymerization, ATRP, RAFT or other controlled polymerization methods, providing aromatic content, fluorescence response, high-Tg potential, refractive-index enhancement and optoelectronic functionality.

Based on our research, fluorenyl methacrylate should be treated as a small family of functional fluorenyl-containing methacrylate monomers rather than as a single CAS product. The value of this category comes from the rigid aromatic fluorenyl group, fluorescence response, high-Tg potential and optical-property tuning, while the methacrylate double bond enables radical polymerization, copolymerization and controlled polymerization.

From the supply perspective, this is a niche functional monomer market with a limited number of publicly documented suppliers. BLD is the strongest China-based core supplier candidate based on available product-page evidence, while Alfa Chemistry can be treated as a confirmed supplier.

Demand is mainly driven by functional polymethacrylate synthesis, fluorescent polymer

labeling, optical coatings, high-refractive-index transparent materials, organic electronics research and polymer physics studies. This is not a bulk methacrylate market; it is a research- and project-driven niche with high unit prices and small batch volumes. Future growth is expected to come from luminescent polymers, optical functional coatings, OLED/OPV research, high-Tg aromatic polymethacrylates, sensing materials and custom comonomer development.
