Fluorescence Lifetime Spectrofluorometer is an instrument used to measure the residence time of fluorescent molecules in the excited state. It calculates the fluorescence lifetime by detecting the attenuation curve of the fluorescence signal, that is, the time required for the fluorescence intensity to drop to the initial value of 1/e (approximately 37%). This instrument can be measured by methods such as time-dependent single photon counting (TCSPC) or frequency modulation, and is widely used in fields such as biomedicine and materials science to study molecular environments, energy transfer, and biomolecular interactions, etc.

United States market for Fluorescence Lifetime Spectrofluorometer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
