The global Fluorescent Dextran market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Fluorescent dextran is a type of dextran molecule that has been modified to exhibit fluorescence. Dextran is a polysaccharide made up of glucose units, and by adding a fluorescent dye to it, researchers can create a molecule that emits light when excited by a UV or visible light source. This property makes fluorescent dextran useful in various applications, such as in cell labeling, tracking, and imaging techniques. It can be used to study cell migration, viability, and interactions within living organisms. Additionally, fluorescent dextran can serve as a molecular probe for detecting and visualizing specific targets in biological samples.

United States market for Fluorescent Dextran is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
