Fluorescent powder is a luminescent material, generally divided into two categories: photoenergy storage luminous powder and radioactive luminous powder. Photo energy storage luminous powder is a phosphor that stores light energy after being irradiated by natural light, sunlight, ultraviolet light, etc., and then slowly releases it in the form of fluorescence after stopping the light irradiation, so it can be used at night or in dark places. , the glow can still be seen and lasts for several hours to more than ten hours.

Phosphor powder has the characteristics of good thermal stability, safety and environmental protection. It is suitable for all kinds of white light and can be adjusted to different colors of red, blue, yellow, etc. It is usually used to make fluorescent lamps and fluorescent signs. Fluorescent lamps are highly efficient lighting devices that use an electric current to excite phosphors, causing them to emit visible light.
