Fluorescent tubes recycling refers to the process of collecting, processing, and recycling fluorescent light tubes, which contain small amounts of mercury. The recycling process involves the safe collection, transportation, and processing of used fluorescent light tubes to recover valuable materials and prevent the release of hazardous substances into the environment. Fluorescent tubes recycling is important for reducing the environmental impact of mercury waste and for promoting a more sustainable approach to lighting technology. By recycling these materials, the demand for new glass and metal products is reduced, and the energy required to produce new materials is also minimized.

The global Fluorescent Tubes Recycling market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
