Fluoride fibers are optical fibers based on fluoride glasses, e.g. fluoroaluminate or fluorozirconate glasses. The cations of such glasses are usually from heavy metals such as zirconium or lead. Fluorozirconate glasses (where ZrF_4 is the major component) are a typical example, and among them ZBLAN glass (ZrF_4 - BaF_2 - LaF_3 - AlF_3 - NaF) is the most common. Such fibers can be doped with a number of rare earth ions for application in fiber lasers and amplifiers. There are also indium fluoride fibers (fluoroindate fibers) with improved infrared transmission at longer wavelengths.
