Fluorine-containing organic compounds have high fat solubility and hydrophobicity, which promotes their absorption and transmission in the body and changes their physiological effects. Therefore, many fluorine-containing medicines and pesticides have relatively low dosage, low toxicity, and drug performance. It has the characteristics of high efficiency and strong metabolism, which makes it occupy a higher and higher proportion in the new pharmaceutical and pesticide varieties. Common fluorine-containing pesticide intermediates include fluorine-containing fungicides, fluorine-containing insecticides, fluorine-containing herbicides, fluorine-containing acaricides, fluorine-containing plant growth regulators and other pesticide intermediates.
