According to our LPI (LP Information) latest study, the global Fluorine Anhydride Polyimide market size was valued at US\$ 74 million in 2023. With growing demand in downstream market, the Fluorine Anhydride Polyimide is forecast to a readjusted size of US\$ 777.3 million by 2030 with a CAGR of 39.8% during review period.

The research report highlights the growth potential of the global Fluorine Anhydride Polyimide market. Fluorine Anhydride Polyimide are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Fluorine Anhydride Polyimide. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Fluorine Anhydride Polyimide market.

Fluorine Anhydride Polyimide is obtained by reacting hexafluorodianhydride (6FDA) with an aromatic diamine. Hexafluoro dianhydride contains a perfluoroisopropyl group without a hydrogen atom, and thus has high heat resistance and resistance to thermal oxidation. Such polyimides are amorphous and do not crosslink, which contributes to the polymer's meltability and molecular chain flexibility. Typical products such as DuPont's NR-150 series materials. The mechanical strength at room temperature and the mechanical strength after long-term aging in air above 300 ° C are good. The dielectric constant is 2.9 at room temperature, and the loss factor is about 1×10^{-3} - 2×10^{-3} . Even at temperatures as high as 18 ° C, these data do not change much. The material has good hydrolysis resistance and is easy to process, and can be used for preparing laminates, coatings and adhesives. The fluoro anhydride type polyimide

material has excellent properties, but the monomer cost of the material is high, which hinders the large-scale application of the material to some extent.

Korea is the largest Fluorine Anhydride Polyimide market with about 78% market share. China is follower, accounting for about 20% market share.

The key players are Sumitomo Chemical, Kolon, SKC, Kaneka, JSR, HiPolyking etc. Top 3 companies occupied about 70% market share.
