Fluorine-based Plasma Surface Treatment Machine for Leather refers to the plasma cleaner that is mainly used in the leather industry. Plasma cleaner, also known as plasma cleaner, or plasma surface treatment instrument, is a brand new high-tech technology that uses plasma to achieve effects that conventional cleaning methods cannot. Plasma is a state of matter, also called the fourth state of matter, and does not belong to the common solid-liquid-gas three-state. Apply enough energy to the gas to ionize it into a plasma state. The 'active' components of plasma include: ions, electrons, atoms, active groups, excited nuclides (meta-stable state), photons, etc. Plasma cleaners use the properties of these active components to treat the sample surface, thereby achieving cleaning and coating purposes.
