The global Fluorite market size is predicted to grow from US\$ 3812 million in 2025 to US\$ 4851 million in 2031; it is expected to grow at a CAGR of 4.1% from 2025 to 2031.

Fluorite, also called fluorspar, is the common name of the mineral having chemical composition calcium fluoride (CaF_2). It is a mineral with veritable bouquet of brilliant colors from hallmark color purple to blue, green, yellow, colorless, brown, pink, black and reddish orange. The rich purple color is by far the most famous and popular color. It is an important commercial source of fluorine. Fluorite plays a vital role in the manufacture of aluminium, gasoline, insulating foams, refrigerants, steels and uranium fuel.

Globally, the production of fluorspar is mainly concentrated in China, Mongolia, Mexico, Europe and South Africa. Orbia is the largest manufacturer of fluospar while China is the largest consumer.

Fluorspar is the main source of Hydrofluoric Acid, a key ingredient for the production of fluorocarbons, used in refrigerants, air conditioning systems, and as feedstock in the production of various chemicals. The growing demand for these chemicals in industries like electronics, pharmaceuticals, and refrigeration is a major driver for fluorspar consumption.
