Abstracts

The global Fluoropolymer Coatings for Construction market size is predicted to grow from US$ 674 million in 2025 to US$ 1007 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Fluoropolymer Coatings for Construction are high-performance coatings specifically designed for the protection and decoration of building surfaces. They are primarily composed of film-forming fluoropolymers like polytetrafluoroethylene, polyvinylidene fluoride, and fluorinated ethylene propylene copolymer. In 2024 the production was 66,326 tons and the average price was $9,800 per ton.

Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.
