Fluoropolymer Lined Dip Pipes?? are corrosion-resistant immersion tubes used to safely transfer aggressive liquids, gases, or slurries from tanks or reactors. They feature a durable ??PTFE, PFA, or ETFE fluoropolymer lining?? bonded to a metal (typically stainless steel or carbon steel) outer shell, combining structural strength with superior chemical resistance. These pipes are designed to withstand highly corrosive media—such as strong acids, caustics, solvents, or high-purity chemicals—while preventing contamination, scaling, or leakage. Common in chemical processing, pharmaceuticals, and semiconductor industries, they offer smooth internal surfaces for unimpeded flow, thermal stability (-200°C to +260°C), and non-stick properties to minimize buildup. The lined construction also eliminates galvanic corrosion risks, extending service life in harsh environments.

United States market for Fluoropolymer Lined Dip Pipes is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Fluoropolymer Lined Dip Pipes is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
