Fluoropolymers are a family of plastics that use the fluoride ion to create superior protection against chemical corrosion and permeation. Partially fluorinated polymers provide cost effective corrosion barriers for many lining applications.

Fully fluorinated polymers, due to the strength of the fluorine-carbon bond, provide resistance to attack from virtually all chemicals, making them the lining of choice for severe chemical service. This trait also makes them the linings of choice for transporting and storing ultra-high purity chemicals for the semiconductor industry.
