The global Fluorosilicone Coated PET Release Liners market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Fluorosilicone Coated PET Release Liners are specialized materials used in the production and handling of adhesives and other sticky substances. These liners consist of a base layer made from polyethylene terephthalate (PET), a durable and flexible plastic, which is coated with a thin layer of fluorosilicone. The fluorosilicone coating provides excellent release properties, allowing adhesives to easily separate from the liner without leaving residue or causing damage. This makes them ideal for use in applications requiring clean and efficient adhesive release, such as in the manufacturing of labels, tapes, and other adhesive-backed products. The combination of PET and fluorosilicone offers both mechanical stability and high resistance to chemicals and temperature variations, ensuring reliable performance in various industrial settings.

United States market for Fluorosilicone Coated PET Release Liners is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
