The global Flush Diaphragm Pressure Switch market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The flush diaphragm is a diaphragm that is fully opened and exposed to the pressure medium when installed and is flush or slightly recessed with the surrounding surface. For pressure sensors that are used to measure viscous media for a long time, the pressure holes at the threads are easily blocked by the medium, affecting the accuracy of the measurement. The sensing diaphragm of the flush diaphragm pressure sensor is located at the front end of the connecting thread. This design allows a large area to contact the measuring medium and is not easy to be blocked. The residue or scale on the diaphragm is also easy to clean, which extends the service life of the pressure sensor.
