The global Flux Cored Wire Forming Machine market size is predicted to grow from US\$ 1203 million in 2025 to US\$ 1875 million in 2031; it is expected to grow at a CAGR of 7.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Flux-cored welding wire forming machine is the core equipment for producing flux-cored welding wire. It forms finished welding wire by rolling thin steel strip into tube and filling it with flux of specific composition (such as metal powder, alloy elements, etc.), and then drawing, sealing and other processes. Its core functions include metal tube forming, flux filling uniformity control and welding wire surface treatment. It is widely used in automobile manufacturing, shipbuilding, building steel structure and other fields.

In 2024, the global flux-cored wire forming machine market size is expected to be approximately US\$1.2-1.5 billion (approximately RMB 8.5-10.5 billion), mainly driven by the popularization of automated welding technology, manufacturing equipment upgrades and the expansion of the new energy industry chain (such as wind turbine tower welding demand). The Chinese market accounts for approximately 30%-35%. Benefiting from the acceleration of domestic substitution and the '14th Five-Year Plan' high-end equipment policy support, the compound growth rate is expected to remain at 6%-8% in the next three years.
