The global Flyback Transformer market size is predicted to grow from US\$ 1256 million in 2025 to US\$ 1815 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Flyback Transformer (Flyback Transformer) is a transformer in a conversion circuit, which is mainly used to convert DC voltage into another DC voltage. The working principle of the flyback transformer in the circuit is to change the output voltage by changing the magnetic flux. It has the advantages of simple circuit structure and low cost, so it is widely used in many power supply applications.

In a flyback converter, the output receives energy when the primary winding is powered off, and is in a discharged state when the primary winding is powered on. The difficulty in designing a flyback converter lies in how to design the magnetic core and coil of the transformer to meet the performance requirements under different input voltage and load conditions. Especially when the input voltage fluctuates in a wide range, the magnetic core of the transformer may work between continuous current mode and discontinuous current mode, which makes the design more complicated.

United States market for Flyback Transformer is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Flyback Transformer is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
