According to this study, the global FMCW Lidar Technology market size will reach US$ million by 2030.

FMCW Lidar technology combines the most advanced microwave radar signal processing concept with laser technology, and realizes the detection of more dimensions and higher sensitivity by accurately manipulating and demodulating the laser micron wavelength, so as to solve the technical dilemma of TOF and millimeter wave radar in the field of moving target detection.

At present, there are few enterprises engaged in the research and development and production of FMCW LiDAR globally, and the difficulty of mass production of FMCW LiDAR is high, and large-scale application has not yet been achieved. However, FMCW LiDAR has significant advantages in sensitivity, detection range, and anti-interference ability, making it the development trend of the next generation LiDAR technology. With technological breakthroughs, the future application prospects of FMCW LiDAR are still promising.
