Foam-based polyurethane is a high molecular polymer made by polymerizing and foaming isocyanate and hydroxyl compounds. This material is porous, so its relative density is small and its specific strength is high. It is usually divided into two types: soft foam and hard foam. Soft foam has an open-cell structure and hard foam has a closed-cell structure.

Polyurethane foam is widely used in many fields due to its excellent performance, such as construction, automobiles, light industry, textiles, petrochemicals, metallurgy, electronics, national defense, medical treatment, machinery, etc. Specifically, soft foam is mainly used for sofa furniture, pillows, cushions, toys, clothing and soundproof linings, etc., while hard foam is mainly used for building exterior wall insulation, integrated roof waterproofing and insulation, cold storage insulation, and pipes. Insulation materials, etc.

In addition, polyurethane foam also has excellent elasticity, softness, elongation and compressive strength, good chemical stability, resistance to many solvents and oils, excellent wear resistance, processability, thermal insulation and adhesion. Very good.

The global Foam Based Polyurethane market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
