The global Foam Gasket Material market size is predicted to grow from US\$ 309 million in 2025 to US\$ 406 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Foam gasket material is a type of soft, compressible material used to seal gaps and joints between two surfaces. It is often made from various types of foam materials such as polyurethane, polyethylene, neoprene. The foam gasket material is used to create a seal that is resistant to air, water, dust, and other environmental factors. It is commonly used in a variety of industries such as automotive, electronics, and construction to prevent leaks or to provide cushioning.

The foam gasket material market is expected to grow significantly over the forecast period. This growth can be attributed to the increasing demand for foam gasket materials from various end-use industries such as automotive, electronics, and construction. Geographically, Asia-Pacific is expected to be the largest market for foam gasket materials due to the growing automotive and electronics industries in the region, followed by North America and Europe. In terms of product classification, Foam gasket material is mainly divided into PU foam, PVC foam, EDPM foam, etc., of which PU foam accounts for the largest proportion.
