Foam packaging solutions are packaging materials that utilize foam to protect and cushion products during storage, transportation, and handling. Foam used in packaging is typically a cellular material, which means it has a structure of numerous cells filled with gas (usually air). The most common types of foam used are expanded polystyrene (EPS), expanded polyethylene (EPE), and polyurethane (PU) foam.

EPS foam is made from polystyrene beads that are expanded through the application of heat and steam. EPE foam is produced by a process that involves cross - linking polyethylene resin under high - pressure steam. PU foam is created through a chemical reaction between polyols and isocyanates, resulting in a foam with a wide range of densities and physical properties.
