Foam Refrigerant Bricks are specialized cooling devices used primarily for temperature control in shipping and storage applications. These bricks are composed of a foam material filled with a refrigerant gel or liquid, which has a high thermal capacity. When frozen, they maintain low temperatures for extended periods, making them ideal for transporting perishable goods such as food, pharmaceuticals, and biological samples. Their foam construction provides insulation, helping to regulate and sustain the desired temperature more efficiently compared to solid ice packs. These bricks are reusable, environmentally friendly, and designed to fit various container sizes, ensuring versatile and reliable temperature management.

The global Foam Refrigerant Bricks market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
