Abstracts

The global Focus-Tunable Liquid-Based Telecentric Lens market size is predicted to grow from US$ 238 million in 2025 to US$ 413 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

A focus-tunable liquid-based telecentric lens is an advanced machine vision imaging component that integrates telecentric optical design and electro-controlled liquid lens technology. It achieves rapid zooming without mechanical movement by voltage-controlled droplet curvature, while maintaining the principal ray parallel to the optical axis. This ensures constant magnification, ultra-low distortion (<0.1%), and high resolution at different working distances, making it suitable for industrial scenarios requiring dynamic focusing, such as online inspection of lithium battery electrodes, semiconductor packaging alignment, and 3D precision measurement. The upstream of its industry chain includes suppliers of optical glass substrates, dielectric/ionic liquid materials, microfluidic chips, drive circuits, and high-precision lens barrel processing equipment; the midstream consists of high-end manufacturers with optical-electromechanical-algorithm integration capabilities, requiring expertise in liquid lens packaging, telecentric optical path optimization, and real-time control algorithms; the downstream primarily targets automation equipment manufacturers in the new energy, semiconductor, and consumer electronics sectors. In 2024, the global production of focus-tunable liquid telecentric lenses was approximately 75,000 units, with an average price of $3,056 per unit. The gross profit margin of major enterprises is 50%–68%, and the single-line production capacity is 5,000 pieces/year.

United States market for Focus-Tunable Liquid-Based Telecentric Lens is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
