The focusing flat-top beam shaper is used to convert a Gaussian beam into an Airy disk profile to control the intensity distribution of the laser spot. The output beam is almost 100% effectively shaped into a flat-top or circular beam profile. Focusing the beam after a flat-top beam shaper results in the loss of the flat-top profile. Focused flat-top beam shapers provide an alternative solution for obtaining flat-top beams by generating an Airy disk beam profile.

The global Focused Beam Shaper market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
