The global Foldable Phones market size is predicted to grow from US\$ 10440 million in 2025 to US\$ 11520 million in 2031; it is expected to grow at a CAGR of 1.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A foldable smartphone is a form factor of smartphone, which allows access to a larger, tablet-like display when needed by unfolding the device, whilst maintaining a similar footprint and functionality to a standard smartphone when folded (typically along a vertical axis). The screen may either wrap around to the back of the device when folded (as with the Royole Flexpai and Huawei Mate X), or use a booklet-like design where the larger, folded screen is located on the interior, and a screen on its 'cover' allows the user to interact with the device without opening it (such as the Samsung Galaxy Fold).

Foldable phones are the big new smartphone trend of 2019 (aside from 5G phones, of course, though some will be both). The Samsung Galaxy Fold and Huawei Mate X are the biggest two foldable phones announced, but the world's first foldable was actually the Royole FlexPai.
