The global Folding Logistics Turnover Box market size is predicted to grow from US$ 1068 million in 2025 to US$ 1445 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Foldable logistics turnover boxes are foldable and stackable containers made of durable plastics or composite materials, used for material storage, transportation, and turnover in the supply chain. Their foldable structure saves space and improves warehousing and transportation efficiency, making them an important tool for modern logistics and inventory management. In 2024, the global production of foldable logistics turnover boxes was approximately 58,333,333 units, with a global average market price of approximately US$18 per box. The gross profit margin of major companies in the industry ranges from 25% to 40%. Single-line production capacity is 120,000 to 300,000 boxes per year. The upstream of the foldable logistics turnover box industry chain mainly includes raw material suppliers such as polypropylene (PP) and polyethylene (PE), as well as equipment and supporting service providers such as injection molding machines and mold manufacturers, providing basic materials and process support for turnover box production. The midstream consists of turnover box R&D and manufacturing enterprises, including general plastic product manufacturers and customized solution providers specializing in logistics equipment. Products need to balance strength, lightweight, stackability, and folding rate, and are gradually incorporating RFID tags or smart tracking modules. The downstream is widely used in automobile manufacturing, e-commerce warehousing, fresh food cold chain, pharmaceutical distribution, and third-party logistics companies. Especially in the context of promoting circular packaging and green supply chains, large brand owners and logistics platforms have become core purchasers. With the advancement of the "lease-to-own" sharing model and standardized logistics system, the industry chain is
