A wheelchair is a chair with wheels. The device comes in variations allowing either manual propulsion by the seated occupant turning the rear wheels by hand, or electric propulsion by motors. There are often handles behind the seat to allow it to be pushed by another person. Wheelchairs are used by people for whom walking is difficult or impossible due to illness, injury, or disability.

Folding Wheelchairs are very simply wheelchairs that are able to be reduced in size easily to support storage and transportation.

Folding wheelchairs are designed for the benefit of caregivers more than that of the user. They fold into a narrow package when not in use they are easily stored away or transported in vehicles.
