Foliar Nutrient Fertilizer is a fertilizer that provides essential nutrients to plants by spraying on the leaves. It contains various nutrients required by plants, such as nitrogen, phosphorus, potassium and other macroelements, as well as iron, zinc, manganese and other trace elements. It can quickly supplement the nutrients required by plants during growth, improve the photosynthesis efficiency of plants, and enhance the resistance of plants, such as drought resistance, cold resistance, and disease resistance. Compared with traditional soil fertilization, foliar nutrient fertilizer is directly absorbed through the leaves, avoiding soil fixation and loss, and improving the utilization rate of fertilizer. This fertilizer is widely used in agricultural production, especially in the key growth period of economic crops such as fruit trees, vegetables, and flowers, such as flowering period and fruiting period. Foliar spraying of nutrient fertilizer can significantly increase yield and quality. When using, pay attention to the concentration, time and method of spraying to ensure safety and effectiveness.
