The global Food Contaminant Testing Services market size is predicted to grow from US\$ 5400 million in 2025 to US\$ 9347 million in 2032; it is expected to grow at a CAGR of 8.2% from 2026 to 2032.

Food contaminant testing services refer to professional technical services that use physicochemical analysis, biological detection, and instrumental analysis to qualitatively and quantitatively detect pesticide residues, veterinary drug residues, heavy metals, mycotoxins, microorganisms, and illegal additives in food. These services are widely used in food production, distribution, import/export, and regulatory processes. Utilizing chromatography-mass spectrometry, atomic absorption spectrometry, immunoassay, and molecular biology detection technologies, these services can meet the food safety regulations of different countries and regions. The upstream mainly includes standards, chemical reagents, chromatographic columns, consumables, and testing instruments and equipment; the midstream consists of third-party testing institutions and company-built laboratories; and downstream clients include food production enterprises, chain supermarkets, catering groups, and government regulatory departments. With the expansion of global food trade, increasingly stringent regulations, and heightened consumer awareness of food safety, the demand for food contaminant testing services continues to grow, especially in import/export testing, prepared foods, and fresh food cold chain sectors, where the market space is constantly expanding.
