Food grade D-calcium pantothenate is a stable calcium salt form of vitamin B5, with the chemical name D-calcium pantothenate. It is usually a white or off white powder or small crystals, with good water solubility, stability, and high bioavailability. This product belongs to the category of food nutrition fortifiers and must comply with food safety standards, with strict requirements for purity, heavy metal content, and microbiological indicators. Food grade calcium pantothenate is widely used in dairy products, infant formula foods, fortified beverages, cereal products, and functional foods. It is also an important raw material for dietary supplements and health products. As one of the essential vitamins for the human body, pantothenic acid participates in the synthesis of coenzyme A in the body and plays an important role in fat metabolism, energy metabolism, and cell growth. Therefore, food grade calcium pantothenate has a stable and sustained market demand in the field of food nutrition enhancement. In 2025, global Food Grade D-Calcium Pantothenate production reached approximately 5.96 K MT, with an average global market price of around US\$ 29,347 per MT.

The annual production capacity of food grade D-calcium pantothenate is 8,000 tons, with a gross profit margin of about 35%.

The upstream mainly consists of basic chemical raw materials and vitamin intermediate production enterprises, including suppliers of ? - alanine, isobutyraldehyde, formaldehyde, and related fine chemical intermediates, as well as basic chemicals such as calcium salt raw materials. The downstream mainly includes food processing

enterprises, functional food production enterprises, nutritional supplement enterprises, and health product manufacturers.

Cost structure analysis: Raw material costs account for about 55% to 65%, production and manufacturing costs are about 15% to 20%, quality control and food safety testing expenses account for about 8% to 12%, and packaging, transportation, and sales expenses are about 10% to 15%.
